**Source:** Prepared by the San Francisco Department of Public Health on 5 August 2019 based on data from the California Electronic Death Registration System (CA-EDRS) via the Vital Records Business Intelligence System (VRBIS) database accessed on 31 July 2019. Substance-related overdose deaths were identified using textual cause of death fields; homicides and suicides were excluded.

\*Substance categories are not mutually exclusive; a single death can contribute to counts in multiple categories if the death involved multiple substances.

†40 (22%), 38 (17%), and 56 (22%) of total decedents in 2016, 2017, and 2018, respectively, were determined to be homeless through manual review.

§Prescription opioids include buprenorphine, codeine, hydrocodone, hydromorphone, meperidine, methadone, morphine, oxycodone, oxymorphone, propoxyphene, and other opioids not otherwise specified.
